

DREAM GUIDE COMPANY

Creating a new paradigm through the connection of information.

A New Paradigm for IoT Safety Management System!

School Check provides an integrated management solution optimized for safety of kindergartens and schools.

The company remains committed to advancing human-centered values, open information sharing, and the democratization of future-oriented projects rooted in the shared economy.

Dream Guide Company Inc., established in 2017, has been providing its IoT-based safety management system 'School Check' to kindergartens, schools, academies, and businesses across Korea since 2018. The company has also developed and delivered AI-powered smart factory systems, AIoT logistics solutions, and OCR-based ERP platforms to numerous domestic clients.

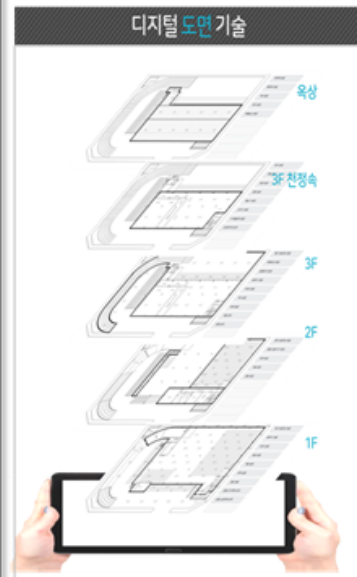

As a nationally certified venture company, Dream Guide operates an in-house research lab focused on AI detection algorithms and AIoT sensor technologies. Its innovations include autonomous drone and robot monitoring systems, facility management using digital blueprints, and AI-driven risk monitoring solutions for smart factories, logistics centers, railways, ports, and airports.

With MOUs signed with 15 companies across 13 countries and successful exports to the U.S., the Netherlands, and Vietnam, Dream Guide holds 10 technology patents.

AI-Based Fire & Explosion Detection with Remote Suppression

Intelligent Hazard Monitoring for Smart Manufacturing

Examples of Field Hazards

[Detection of Indoor and Outdoor Forklift & Car Collision Accidents]

[Detection of Fire, Explosion Incidents, and Machinery Entanglement Accidents]

[Detection of Fall and Collapse Accidents]

AI-based integrated monitoring system for risk situations

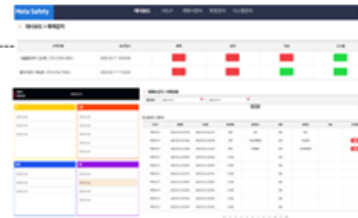

[AI-Based Vision Analysis]

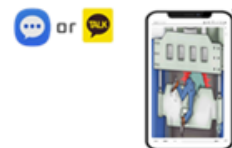

[Platform Server]

Remote Administrator
Detection and Management
[Administrator Web]

[Provides Smartphone APP
Warning notifications]

Our intelligent safety solution is designed to detect the most common types of workplace accidents—including crushing, entrapment, falls, collapses, explosions, and fires—and immediately notify both managers and workers to ensure rapid response and enhanced protection.

Our intelligent safety system continuously learns and adapts to detect potential risks specific to each site—whether it's a public institution, factory, or logistics center. By reflecting the unique safety priorities defined by administrators, the system delivers tailored, real-time hazard detection and proactive alerts.

Smart Surveillance Powered by Self-Driving Robots & Drones
